Abstract:	Keywords:
In this article has spoken spiritual enlightenment education and upbringing and training by teachers from soil science department.	pedagogical, informational, educational, spiritual, classical, social, informational.

Introduction

Introduction. As we all know, the training of specialists who meet the requirements of the present time is one of the pressing issues facing higher educational institutions in our republic. The ability of the teacher to carry out tasks in the field of education in addition to providing high – quality knowledge to young people is one of the characteristics required of each educator by the level of knowledge, ideological beliefs, talent, professional skills, that is, the ability to apply modern pedagogical and Informational Technologies in their place.

At the same time, the use of historical monuments, classical literature and various spiritual events with our cultural heritage along with modern pedagogical technologies to enrich the traditional methods that are present in the modern educational system and increase the effectiveness of the educational process is considered a requirement of the period.

What should we pay attention to in the education of young people of the present day?

In our society, young people are a leading force, how strong the scientific potential and general culture of the younger generation is associated with the development of tarrahiyot. We make our young people feel that we, educators, must first and foremost educate them to be spiritually high, educated and patriotic in every way, and act as best we can.

Styles and materials. Spiritual maturation is defined by scholars as " man – making, humanizing humanity, passing from generation to generation, over the evil of the good, over the ambition of the feeling, over the wildness of the good, over the ugliness of the beauty, over the vulgarity of The Feminine, over the lust of conscience, over the ignorance of wisdom, ... they are the great ones with a pure spirit, who ensure the victory of religion over superstition." [1] the fact that each of our young people understands their duty and responsibility to the motherland, society, family, expresses its spiritual perfection.

It has not yet been so much that the establishment and perfection of the requirements of tutoring are applied to complete training processes. Nevertheless, in this area of pedagogy, specific aspects are also manifested.

In higher education, the spiritual teacher who supports students on a good - bad day, who responds to their spirituality, manners, upbringing, is the rightful one, can help in their difficulties, is a mentor, a tutor, is considered to be a tyutor when spoken with modern language. The model regulation on the procedure for organizing the activities of tyutor in state higher educational institutions reads:

Tyutor is an employee of high moral qualities who operates in a higher educational institution, meets the requirements of the relevant qualifications, helps students of the attached group in their education, as well as in their meaningful Organization of free time from classes, leads activities aimed at raising them in the spirit of humanity, Justice, hard work, love for the motherland, attracting clubs and clubs Such requirements are again imposed on the goals and objectives of the activities of the office:

- effective organization of the harmony of the educational and educational process;
- regulation of relations between the educational institution and students;
- better self-awareness, reading and making the right decisions in life, increasing love for the chosen profession, while providing socio-spiritual and psychological assistance to students;
- analysis of students ' mastery of classroom activities and ensuring that they have meaningful free time from class;
- it consists in constant awareness of their social (family) State. [2]

Research Results

Each student has a certain range of self - esteem and thinking, interests in science. In order for each student to find a way to his heart, for him to gain the confidence of the Student, Of course, tyutor himself must also be a psychologist.

Maintaining a data questionnaire about each student is calculated from the duties of the tyutor in the first gal and provides the opportunity to constantly stay informed of the student. And the data questionnaire also displays complete information about the parents of the students. There is another student questionnaire, which is conducted on the interests of students. But unfortunately, the requests for these questionnaires are short, and the student Ham is asked to give a short answer. When this questionnaire was compiled in a slightly expanded form and given time to fill out requests without haste, students would be able to highlight their interests in detail. Among our students , unfortunately, the interests of many people are limited to public interests such as learning a foreign language, reading a book or I am interested in culinary, or football. It's okay, because interest in learning a foreign language and trying to do it is definitely commendable. There is no point among students in saying, "If I write it down, I'll get rid of it". The "information hours" are viewed as a class on a university scale and are constantly monitored, with weekly transfers set according to the study hours plan. "Information hours" are specially created and students are introduced to the socio – economic and political events taking place in our republic, the world and the University. In this regard, it should be noted that the

=====
"information hour" is required not only to introduce news, but also to interpret and explain them. This requires that the coach himself be a person who is also aware of politics, has a broad world view, and is able to properly assess events. The second part of the "information hour" is allocated to spirituality. Conversations on topics such as enrichment of the spiritual consciousness of students, acquaintance with art and culture, explanation of certain vices that poison the consciousness of young people, the consequence of terrorism, some problems in the group are solved. Spirituality topics were also planned for one academic year. In addition, our youth M.Ulugbek, A. It is advisable to strengthen the knowledge of our scientists and thinkers such as Navoi, Amir Temur, Babur, and to hold small events in order to celebrate their birthdays and keep their memory, to be included in the work plan of each tyutor.

Improving the effectiveness of the pedagogical process, which goes between the educator and the educator in the educational process, has its own characteristics in any period, which is becoming more and more perfect. Currently, in the educational system, students are instilled with theoretical knowledge, as well as skills and qualifications in practical and laboratory training. In addition in the curriculum, the hours of independent education are given in each discipline section. This part of the education makes the connection between students and the education of the tyutor. Tyutor gives students directions in the performance of independent work, instructs them in the selection of literature on the recommendation of a science teacher for the completion of assignments. Taking the example of the Science "Soil Science", In Independent Education the topic "modern technologies used in the determination of soil properties" is given. It is this topic that can also be relevant for the disciplines of soil physics, soil chemistry. The tutor should be able to explain to the student that these subjects themselves cannot develop independently, form a certain part of Soil Science. To do this, the tyutor himself must have a certain knowledge of these specialties. In addition, talented and curious students studying in a certain direction of Higher Education will be able to attract students with experience to the scientific activities of senior professors, organize meetings with them, correctly indicate the scientific direction to talbalr.

It is increasingly noticeable that globalization is changing the spiritual views of our young people in a negative way as well. Today, the youth upbringing of globalization is manifested in those that have a negative impact on the development:

1. First of all, the penetration of the Internet, cell phone, telecommunications and various information publications as a result of the high development of informational tools. The "values" offered through these means are in many cases distancing our youth from our national values, from their historical roots has been causing his distancing.
2. Secondly, "popular culture" is the prevalence of its various manifestations among young people. These are manifested mainly in dress, interest, leisure, shallow tastes, attitude to national values.
3. From the third, there are cases of imitation among young people, blind pursuit of Western ideals. As a result, it is customary in young people to spend time in the world of computer games rather than reading books, to watch various militant films, the content of which is shallow.

From this, there are cases of tashari falling under the influence of currents alien to our religion and mentality.[3]

Therefore, the main tasks of the tyutor activity in the ham Nizam are as follows:

a) in the field of spiritual and educational and moral education: parents' role, commitment, responsibility and children in foster care assistance in strengthening their relationship with; education to study the quality of education in the institution and further their implementation of measures for improvement; formation of a spirit of respect for national and universal values in students, promotion and promotion of high moral qualities, educating them in the spirit of love for the motherland, respect for our national legislation; upbringing students in the spirit of intolerance and struggle against rich historical, national and religious traditions, that is, terrorism, separatism, proselytism, religious; Each tyutor must observe the classes of academic groups attached to him, in order to monitor the student attendance and the quality of the lesson, to demand the fulfillment of the obligations imposed on the students, to be placed in the TTJ

announcement and participation of the student at the meeting of the commission on this matter the issue of providing,giving the student a description and academic leave participation in the Resolution, their promotion or punishment, the right to make conclusions and opinions when recommending to various scholarships has.

Also, the honor and dignity of each tyutor students, respect for their reputation, regular awareness of their physical, mental and psychological state, monitoring educational, spiritual and scientific activities, monitoring the participation of young people in classes, constant communication with the parents of young people and with themselves is mandatory.

Regular round tables with the parents of students, the organization of meetings are also set out in the tasks of tyutor. This, of course, allows the student to feel more of his duty to the parents. Since Tyutor communicates with parents, hearing about the student's achievements, and not about his shortcomings, increases the father's confidence in the educational institution, the leader and educators. In this regard, in order to encourage students who have completed the semester not only for excellent grades, but also actively participate in public affairs, it was tried in experiments that give students strong motivation to establish the provision of a thank you to the student's parents in coordination with the management.

In addition , it remains common for a coach to personally familiarize himself with the living conditions of students living in rent, to get acquainted with relatives if they live with them, as well as to be required of tutors

In order for students to spend their free time meaningfully, it is constantly taking a tradition to go to the museum, exhibition, amusement parks, outside the city accompanied by tutes for recreation. The purpose of this is to strengthen the student's historical knowledge and strengthen the patriotic ideas in order to get acquainted with the historical monuments, sacred shrines, museums and other cultural monuments of the Republic.

Conclusion. In conclusion, it can be said that if the tasks of the tyutors, the requirements for them are carried out in harmony with the spiritual and educational plans set by the educational institution, we are confident that students will be comprehensively matured, trained as qualified personnel, in the future they will be in the service of the Motherland, the people, increase the honor of the educational institution
